**ORAL USE**
1. Close mouth for about 5 minutes before measurement.
2. Place the thermometer tip under the tongue on a heat pocket (1) as shown in Fig. 7.
3. Hold the thermometer in the same spot for about 40 seconds.
4. Readings will continue to increase and the F (°C) symbol will flash during measurement (See Fig. 8).
5. When peak temperature is reached, the F (°C) symbol will stop flashing (See Fig. 9) and
   a) When the temperature is higher than 99.4°F (or 37.4°C) the beeper will sound “keep-keep-keep” ten times to indicate a high temperature,
   b) When the temperature is lower than or equal to 99.4°F (or 37.4°C) the beeper will sound “keep” ten times.
6. After measurement, record the temperature, then turn-off the unit to save the battery life. If you forget to turn it off, the unit will power down automatically after approximately 5 minutes.

**NOTE:** THE MOUTH MUST REMAIN CLOSED DURING THE MEASUREMENT TO ENSURE ACCURATE READINGS.

**RECTAL USE**
Rectal temperature should only be taken when oral and axillary temperatures are inconvenient. It is recommended that auxiliary temperatures be taken on infants. LUBRICATE WITH LUBRICATING JELLY AND INSERT THE PROBE NO MORE THAN 1/2 INCH INTO RECTUM. Hold thermometer in place until you hear the beep signal and the F (°C) sign stops flashing (about 40 seconds.)

**AXILLARY USE**
Dry armpit before measurement. Place the tip of the probe under arm so that the tip is touching the skin. This area is called axilla. Hold thermometer to so it is parallel to the patient’s body and fold the arm over the chest. This ensures that the tip of the probe is well covered and not influenced by air. Hold thermometer in place until you hear the beep signal and the F (°C) sign stops flashing (about 3 minutes).

**BATTERY REPLACEMENT**
Replace battery with an alkaline LR 41 or equivalent type whenever the battery indicator ( ) is flashing.

1. Remove screw located on the back of the thermometer. Press down on the battery cover and push in the direction shown by the arrow in the illustration.
2. Remove battery with a non-metallic probe.
3. Insert new battery. **NOTE:** The positive (+) side must face outward.
4. Replace the cover.
5. Dispose of used battery properly.

**DISPOSABLE PROBE COVER USE.**
1. Insert the thermometer into probe cover. Take care not to push the thermometer tip through the end of the probe cover.
2. Holding the thermometer and tab of the probe cover as shown, pull away the covering from longer side.
3. Tilt thermometer to remove cover from shorter side.
4. Dispose off the probe cover after taking temperature.

**NOTE:** For rectal use, after applying probe cover lubricate thermometer tip with a water soluble jelly.

**LIFETIME GUARANTEE**
Your new Life Aid Dual Scale Digital Clinical Thermometer is guaranteed to be free from manufacturer’s defects for life under normal use. However, if for any reason (other than above or normal battery replacement) your thermometer does not function properly we will either repair or replace it free of charge for life. This warranty is valid only if unit returned for repair is properly packed to avoid damage in shipping. All parts are covered by the warranty, except batteries and probe covers, where applicable. Please check the battery before returning it. This is usually the source of the problem, should repair be needed, ship freight paid to:
